Cutting-Edge Technology, Proven Approach

At Betlem, we combine technology-based delivery with exceptional customer care in an effort to maximize quality.

For design-build projects, we measure your existing site conditions and upload them into our software for accurate modeling. Alternatively, we can utilize generic engineering models in BIM or CAD and apply piping and HVAC system layouts with actual manufacturer geometry and specifications.

Our design-to-fabrication workflow helps support efficient collaboration and model generation, which seamlessly transfers to fabrication in our facility.

EMCOR Services Betlem offers comprehensive pipe fabrication services from a team of skilled welders and experienced fabrication professionals. We operate our own facility, outfitted with the latest industry technologies, which allows us to fabricate wide range of materials in-house, helping boost project efficiency, improve quality control, and reduce labor costs.

Complete Pipe Fabrication Solutions

Our fabrication team can design, spool, fabricate, install, and service virtually any piping and HVAC system. The shop is equipped with the latest tools, enabling us to offer a full breadth of services and work with a variety of materials, from steel and stainless steel to copper, plastic, and more.

Our system expertise includes:

- > HVAC piping
- > Industrial and process piping
- > Refrigeration and low temperature piping
- > Custom equipment skids – premanufactured equipment
- > Equipment support steel
- > Custom pump sets and enclosures
- > Boilers and chillers
- > Cooling towers and heat exchangers
- > Backflow stations
- > Plumbing prefabrication

Our capabilities include:

- > Grooved and welded assemblies
- > Screw connections
- > Roll groove and cut groove
- > Steam pressure-reduction
- > Brazed, soldered, and glued piping systems
- > Stick welding, TIG, MIG
- > Orbital welding
